

# QUICK GUIDE ON HOW TO INSTALL A LED LIGHTBULB

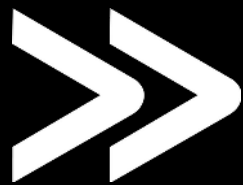

Lighting accounts for 15% of a typical household's electricity bill. You can cut your lighting bill and energy use by changing which bulbs you use and how you use them. Light Emitting Diodes (LEDs) are the most efficient type of bulb for your home and will save you more money in the long term. LEDs are available to most fittings, please see below for the options Energyworks provide.

- ✓ **Make sure the power is off before changing a lightbulb. If you don't know if the light switch is off the safest way to do this is to switch the large red power button to 'off' on the fuse box.**
- ✓ **To remove a bayonet bulb, grasp the bulb lightly but firmly, push upwards gently and turn left until it is released from the socket. To remove a screw in bulb Keep gently twisting anticlockwise until the bulb comes loose from the socket.**
- ✓ **To insert the LED, lightly but firmly push into the socket and depending on the type, turn it right until it locks into place (bayonet) or keep gently twisting clockwise until it won't go any further (Screw).**
- ✓ **Restore the power and check the lightbulb comes on.**

## Safety

- **Check the wattage on the used bulb or light fitting and replace it with a bulb of the same or lower wattage.**
  - **Dispose of the bulb well out of the reach of children**
  - **Don't put your fingers in the exposed light socket.**
